

Samsung Galaxy Camera 2 Lens Assembly Replacement

This guide will help you to replace the lens assembly, including zoom apparatus.

Written By: Timothy Proto

INTRODUCTION

This guide will show you how to replace the lens of the camera. This guide comes in handy if the "camera" part of your Android camera is malfunctioning. Anything from the glass lens being cracked to the zoom not extending can be fixed by replacing the lens mechanism. Make sure to remove the battery before attempting any repairs!

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
 - [Tweezers](#) (1)
-

Step 1 — Screen

- While holding the camera, take note of each screw holding the screen to the main chassis of the camera.
- Hold the camera upright and lens facing towards you. There are a total of six 4mm PH00 screws to undo - two on the left, one screw on the right, and three along the bottom. Two of them are hidden behind the battery compartment door.

Step 2

- Use the screwdriver to remove screws listed in step 2. There are a total of six 4mm screws.

Step 3

- With the screws removed, use the plastic opening tool to gently pry the screen away from the main camera chassis. The ideal spot to start is at the corner with the headphone jack, as indicated in the picture.
- Once this side is free, gently work your way along the edge, all the way around the camera body.

Step 4

- With the screen freed, gently lay the camera on its face, so that the battery compartment faces up. Use both hands to lift the screen up and away.

 **The screen is still attached** to the motherboard by a ribbon cable. **Be Gentle** as it's very fragile.

Step 5

- With the screen separated from the main chassis, use the plastic opening tool to gently pry the edge of the ribbon cable connector from the motherboard.

Step 6 — Screen Separated

i Now the screen is removed.

- Set the body aside in a safe place.

Step 7 — Lens Assembly

- After removing the screen and battery to access to the inside of the camera, take note of the two main assemblies inside-- the lens apparatus and the main motherboard. The lens assembly is on the left hand side.
- There are three small silver screws (4mm PH00) to remove.

Step 8

- With the three screws removed, take note of the two ribbon cables connecting the lens assembly to the main motherboard.
- Use the tweezers to remove the two green strips of tape protecting the connectors.
- Use the plastic opening tool to release the black clips locking in the ribbon cables, then use the tweezers to gently pull the ribbon cables away from the main motherboard.

Step 9

- Now that the screws and ribbon cables have been removed, gently pull the lens assembly up from the the camera and remove it.

To reassemble your device, follow these instructions in reverse order.
